Course Description

Psychology is the scientific study of the mind and behavior. This course is an introduction to the cognitive and biological aspects of psychology. The course discusses topics including the formation of psychology as a discipline, an introduction to research methods and neuroscience, and an overview of some of the major fields in psychology such as perception, learning and memory, language, consciousness, and thinking. The course considers human psychology as well as the insights that can be gained from research in non-human species.
