Course Description

This course is situated on the interplay between social, clinical, and forensic psychology. Next to the major models on the existence and maintenance of aggression, and both nature and nurture-related causes, the course focuses on the main expression forms, cultural influences, and pathological disorders related to aggression. The course addresses how aggression can be measured adequately and what the treatment options are. The course examines topics including reactive and proactive aggression; anger and hostility; pathological disorders related to aggression; the main models on aggression such as GAM and I-cubed model; nature and nurture related origins of aggression; treatment models available for aggression including like cognitive therapy, stop-think-do approaches, schema therapy, and EMDR; and assessment methods used to measure aggression.
