Course Description

The course presents the field of sustainable health and environment from an East Asian perspective in a globalized world. It covers facts and developments in issues related to sustainable health and environment through cross-country lectures, multimedia viewing, panel discussion, and group projects and presentations. The sciences of sustainable health and environment cover broad and intersected disciplines from health sciences, physical sciences to social sciences locally, regionally, and globally. Views of sustainable health and environment are cultivated from current and historical perspectives as well as local and regional living experience. Global perspectives are further cultivated through in-class discussion among students, group projects by cross-country teams, and essay writing. Guest lectures by distinguished experts in the fields of sustainable health and environmental sciences provide global perspectives on sustainable issues.
