UCEAP Transcript Title PRINC CORP FINANCE
UCEAP Quarter Units 6.00
UCEAP Semester Units 4.00

Course Description

This course covers the basic principles of corporate finance and accounting. The course covers the study of key financial concepts, like the time value of money and arbitrage, the valuation of major securities like bonds and stocks, the financial risk and portfolio theory and the CAPM, as well as the accounting principles and reporting and the financial statements, their nature, content, use, and analysis. The nature of the course is technical and quantitative and employs tutorials and the use of exercises and applications to practice the introduced topics. To make the course more hands-on, we stress the importance of using Excel in solving financial problems, which reflects its wide use in business life. Assumed previous knowledge: for students without an economics background this is an intensive and challenging course. To the extent students lack knowledge of Mathematics and Excel, students are expected to compensate for this on their own.

Language(s) of Instruction
English
