Course Description

The course presents the major areas of Clinical Psychology. The course explores the main theoretical perspectives in Clinical Psychology including how to define the field of Clinical Psychology, and being able to identify the differences from neighboring disciplines; evaluating how the concept of mental disorder changed over the course of time; and the main theoretical perspectives in Clinical Psychology, and being able to identify the fundamental features that differentiate perspectives from one another. The course discusses multidimensional assessment including the main instruments and procedures used in clinical assessment, and the reasons for their use; and the reasons for, and the importance of, integrating different dimensions/indices during assessment. The course reviews research methods in clinical psychology including the main research methods used in Clinical Psychology, and their contexts of use; interpreting the results of correlational and experimental research, and of single-subject designs; and the basic characteristics and the usefulness of meta-analytic procedures in Clinical Psychology. Lastly, the course discusses psychopathology including identifying the clinical features of some main mental disorders, and evaluating the etiopathogenetic models of the mental disorders described during the course.
