**UCEAP Semester Units**

4.00

## Course Description

Cultures influence how sustainability issues are viewed and addressed in different contexts and situations. They determine the ways in which environmental, social, and economic considerations connect to sustainability and sustainable urban development. Success in our global sustainability efforts depends on our understanding of the underlying cultures and the connections between them, particularly in the face of urbanization. This course raises awareness of these issues and equips students with the critical thinking and collaborative decision-making skills necessary to find solutions to local and global problems of societal concern. Appropriate cross-cultural case studies will be discussed.
