UCEAP Semester Units

5.30

Course Description

The course is concerned with gathering, critically analyzing, and presenting a coherent body of information on an engineering-related topic. The group is allocated a theme and each member of the group is assigned a topic relevant to the theme. The students, operating as a group, are required to research the theme, developing a body of interrelated knowledge and an understanding of their topics. This is accomplished primarily through investigation of the published literature, and by making contact with industry and other organizations. The objective is to collect, distil, analyze and present in a logical fashion, a summary of the information collected.
