

COURSE DETAIL

BASIC PRINCIPLES OF PHARMACOLOGY

Country

Netherlands

Host Institution

Maastricht University - Center for European Studies

Program(s)

Biological and Life Sciences, Maastricht, Biological and Life Sciences

UCEAP Course Level

Upper Division

UCEAP Subject Area(s)

Biological Sciences

UCEAP Course Number

145

UCEAP Course Suffix**UCEAP Official Title**

BASIC PRINCIPLES OF PHARMACOLOGY

UCEAP Transcript Title

PHARMACOLOGY

UCEAP Quarter Units

6.00

UCEAP Semester Units

4.00

Course Description

The course covers pharmacokinetics (what the body does to a drug) and pharmacodynamics (what a drug does to the body) which describe basic principles that are important for predicting and understanding drug effects in the human body. The course discusses two important (psycho)pharmacological principles of receptors: first, they are organized in multiple subtypes, and second, their interaction with drugs can be defined as agonist, partial antagonist, antagonist, and inverse agonist. The course covers the major principles of signal transduction, in particular in relation to the nervous system. Furthermore, the basic principles of drug metabolism and toxicity are discussed. Finally, the process of drug discovery and development is a topic of interest.
