**Course Description**

International trade is the economic backbone of most countries in the world. The development of information technologies has accelerated trade facilitation and digitalization of cross border exchange. The digital transformation of international trade has reduced operation time and costs; facilitated the global value chain, and connected trade and logistics among communities globally.

Cross border digital trade has attracted more attention than ever in the post COVID-19 era: while normal international trade procedures and operations heavily dependent on paper documents have been interrupted, the use of technologies has lowered the barriers of physical documentation and resulted in the resiliency of international trade.

This course introduces international initiatives as well as government actions in the implementation of cross border digital trade to increase the scale, scope, and speed of trade.  The course also addresses challenges, such as the adoption of new technologies; policy and regulation issues, and change of user behavior during the implementation of cross border digital trade.

**Language(s) of Instruction**
English
