Course Description

The origins of this rich and complicated genre lie in the Middle Ages, when romance was the most popular form of secular literature and the particular narrative form in which women characters developed agency and subjectivity. This course introduces students to the history of romance, with a particular focus on medieval literature, to trace its importance not only to English literary history, but also to a history of women as readers and writers, and the ways in which male writers thought about and adapted a genre that was assumed to be feminine.
