Course Description

This course reviews issues associated with the strategic sourcing of information systems. The main focus is to understand and evaluate different sourcing strategies for information systems. The course describes various sourcing solutions for development and maintenance as well as the management of information systems. The aim is to equip students with the necessary knowledge in order to be able to assess and evaluate different sourcing strategies for information systems. Some of the issues discussed are: What solutions are there for a company that wishes to implement information systems? What advantages and disadvantages do the different solutions involve? What makes one solution fit better than the other?
