MAKING OF MARKET

**UCEAP Quarter Units**

4.50

**UCEAP Semester Units**

3.00

**Course Description**

This course illustrates the interaction of competition law with new technologies, innovation, and intellectual property rights (IPRs) that has triggered heated debates. In recent years, technological developments have opened the doors to more intensified competition in digital markets leading to personalized goods or services in lower prices and higher quality, while sharing economy, online platforms, and disruptive innovators create new possibilities for enormous growth. Yet international organizations, competition authorities, courts, and antitrust scholars are becoming increasingly concerned about the pitfalls and problems of digital competition. Against this background, this course considers how competition law deals with innovation. The following topics are covered: what is the relationship between competition law and IPRs; is IP law promoting innovation; should competition law be reconfigured to deal with innovation in digital economy.
