Course Description
This course covers the fundamental principles of operations management as it applies to projects. It considers the application of various management tools to solving problems in the planning and control of projects. Major topics are project planning and scheduling, resource management, and project control. One of the two projects require students to meet with a contractor who is working on a current project and interview the contractor about the process of scheduling and how the contractor aims to control the process. This course pertains to scheduling management and how to report the progress of a project.
