UCEAP Transcript Title INTERNATIONAL TRADE
UCEAP Quarter Units 5.00
UCEAP Semester Units

3.30

Course Description
This course examines international trade theory and its application to real problems of the world economy. It looks at the classical models of international trade (Ricardo and Heckscher-Ohlin) as well as the models of monopolistic competition; the relation between international trade, migration, and capital flows; the concepts of trade deficit and trade surplus, their relation to investment and savings; the advantages and disadvantages of regionalism and multilateralism. The course also analyzes trade gains together with their redistributive effects, as well as the effects of trade policy (tariffs and quotas) in partial equilibrium and general equilibrium. Students are expected to have completed coursework in microeconomics, mathematics for economics, and microeconomic theory. NOTE: This course is the same as BUS A 136, but taught in English.

Language(s) of Instruction
English
