**UCEAP Semester Units**

3.00

## **Course Description**

Our time is characterized by a series of changes or shifts of unheard of and poorly understood depth and promptitude. Since 1800 wealth has been multiplied by 70, world population by 7, life expectancy by 2. Individualism, mass consumption, mass education, and women's emancipation have been the landmarks of an evolution that some dubbed "the great acceleration". Add on top of that, ever-growing technological changes and environmental degradation and you get a multi-faceted situation that this course aims to understand synthetically and holistically. The course underlines the prospective aspects and whenever possible puts emphasis on the trajectory rather than the current data points.
