Course Description

Through examples of natural resources (minerals, oil, water, and rare earths) this course assesses the current situation of these resources at the quantitative level. It demonstrates various and often competing uses of these resources by our societies, and the current quantitative and qualitative problems in different regions of the world. The course investigates the tensions (past, present, future) that exist around these resources due to their distribution in relation to need, and sometimes due to their scarcity. It highlights the complexity of managing these resources, as will the complexity of the solutions to be implemented.
