Course Description

Economics is the social science of satisfying unlimited wants with scarce resources. Principles of Economics refers to the basic methods and concepts economists use when doing economics, hence to economic analysis. In this view the term “economics” refers to the discipline, not to the economy. This course discusses consumer and producer behavior, markets, business cycles, economic growth, money and the financial system. It also discusses fiscal and monetary policy and policy issues such as unemployment, inflation, and balance of payments surpluses and deficits. In this course, the student gains a thorough acquaintance with the principles of economics. The course covers the economic motives of consumers and producers, the market processes and macroeconomic developments, as well as the interdependencies between economic processes and the main features of public economic policy.
