**UCEAP Semester Units**

4.00

## Course Description

The area of internal control and accounting information systems concerns the quality of (financial) information. As a result of recent corporate financial scandals, this has become a significant issue in today's business. Every business needs a control system that monitors the effectiveness and efficiency of operations, reduces the risk of asset loss, and helps to ensure the reliability of financial reporting and compliance with laws and regulations. This course is an introduction into the key concepts and techniques of internal control, such as information quality, the COSO control framework, IT controls, and organizational controls. Based on these concepts and techniques, the course addresses the design of effective and efficient internal controls for the purchasing, inventory, production, and sales activities of businesses.
