Course Description

This course on climatology covers the basic concepts of meteorology which govern the day to day weather. Physical factors governing the weather such as winds, humidity, latitudinal and longitudinal location, time of year, and others are examined. Weather is analyzed on a macro-scale as well local-scale. This course must be taken concurrently with the tutorial of Climatology. In the tutorial, the professor goes into more detail on the subjects covered during the lecture. Students learn how to analyze weather maps and make predictions of the weather based on these maps.
