UCEAP Semester Units
2.70

Course Description

This course provides students with an overview of anthropology, with an especial focus on cultural/social anthropology. Students examine the development of key concepts in the discipline, such as kinship and social organization, and ask what it means to think anthropologically. This includes considering how the development of human societies relates to other models of change, such as Darwinian evolutionary theory; whether there are universal features of human societies; and how one makes comparisons between different ways of understanding the world.
