Course Description

Business decision making involves considerable complexity and uncertainty. This course introduces the basic concepts in quantitative business analysis and the key elements in the decision making process. The course examines methods that are used extensively in business organizations. These methods provide the tools and the skills to approach, analyze, and solve problems of varying scales. Course topics include: basic probability and statistics; queuing theory; decision theory; regression models; linear programming; inventory control models; supply chain management; and game theory.
