Course Description

This course examines how China has grown into the second largest economy in the world and how it has been integrated into the market-oriented global trade, investment and financial systems. The course introduces the dynamics of China's evolving governance/growth model and its implications for the global economy, focusing particularly on the interactions between China's domestic reform and the opening of its trade, investment and financial sector. Topics include how cross-border trade and investment and decentralization of economic management to local governments turned China into a global manufacturing powerhouse, how investment in infrastructure and liberalization of product and input markets led to rapid urbanization, and how rapid growth created new challenges such as corruption, pollution, inequality, excessive debts, over-capacity, bubbles in property and financial markets, imbalance in trade, stress of US-China economic relations, and issues about macroeconomic management and RMB.
