**UCEAP Quarter Units**

5.00

**UCEAP Semester Units**

3.30

## Course Description

This course is orientated on strategic planning in forest and nature conservation at regional level. By using methods and techniques of Strategic Environmental Assessment, different strategic policy options for a specific region (Sumava National Park, Czech Republic) are developed. In the next step, strategic policy choices are analyzed based on an evaluation of the possible ecological and socio-economic effects of the different options. On the basis of information of various sources (lectures, literature, interviews, excursions, observations) groups of students analyze and evaluate the policy in a specific region in relation with the forest and nature in that region. This case-study work is supported by lectures with different examples of Strategic Environmental Assessment (SEA).
