| **UCEAP Semester Units**<br>3.30 |

**Course Description**

The course explores experiments on language and psychological theories about language processing. At the theoretical level a special emphasis is devoted to differences in the architecture and mechanisms of cognitive models of language processing. At the empirical level a specific attention is devoted to the different experimental methods that are apt to study specific linguistic processes. The course discusses topics including general linguistics, speech production and comprehension, word processing, sentence processing, discourse processing, advantages and difficulties of bilingualism, and models of literary language reception. The course requires students to have knowledge of experimental methods in psychology and of cognitive psychology concepts as a prerequisite. Knowledge of linguistics is welcome but not necessary.

**Language(s) of Instruction**
English
