8.00

UCEAP Semester Units

5.30

Course Description

This course explores key global challenges, including the climate emergency, decolonialization, racism in education, displacement, and migration. The course gives students the means to understand and design proposals (or strategies) to address these challenges. This course takes an exploratory and multidisciplinary look at what is known about climate change and will also examine the inter-relationship between climate change and other key issues. The course provides students the opportunity to creatively explore the role of education in developing hopeful proposals for responding to these challenges and for imagining social, political, and economic alternatives that promote environmental, social, and epistemic justice.
