Course Description

The course covers the basic theories, main research methods, and practical applications of labor economics. Specific topics for discussion include: basic theories and models of labor economics, human capital investment, education, health, social insurance, medical care, environmental pollution, etc. Specific economic research methods include: experimental method, breakpoint regression method, double difference method, instrumental variable method, etc.

The course focuses on the cultivation of economic intuition, the use of econometric models, empirical methods, and the application of labor economics research methods in many fields in China. Through the teaching, students are expected to understand the basic theories in the field of labor economics, master the basic methods of labor economics analysis, and their application in the economic and social context of China.
