PLANT PHYSIOLOGICAL ECOLOGY

UCEAP Transcript Title

PLANT PHYSIOL ECOL

UCEAP Quarter Units

8.00

UCEAP Semester Units

5.30

Course Description

This course introduces the science of Physiological Plant Ecology with a strong focus on plant water relations and how recent climate change is affecting these. Plant Physiological Ecology teaches how plants function, grow, and survive in their ecosystems and how it underpins food security, ecosystem restoration, and the understanding of water as a resource. The course is set to inspire students to learn and think about how terrestrial ecosystems work and function, and what challenges they will be facing in the future.

Language(s) of Instruction

English
