**Course Description**

Firm economics is the study of the various aspects in a firm's economic activities that occur in the process of production, profit maximization, and cost-minimization. In particular, this course introduces theories and empirical results of the firm's main economic activities such as productivity enhance, physical investment, capacity utilization, technology development, R&D, and division of profit under the micro- and macro-economic surroundings. Thus, this course introduces the results of empirical economic analysis using the data of famous international firms. Together with short-run comparative analysis, this course introduces the dynamic analysis of firm in the long-run. Corporate governance is one of important issues to be included in this course.
