Course Description

This course examines how Information and Communication Technology (ICT) allows for high-speed global access – making it possible to instantly connect to anyone and anywhere – and how this immediate access has created a nexus of social, cultural, economic, and political implications for everyone. As members of today's Net Generation, this course not only offers an opportunity to critically evaluate how globalization and ICT have revolutionized the way we live, but also how this new environment uniquely situates students to, in turn, direct many of these changes.
