UCEAP Semester Units

4.00

Course Description

This course explores the relationship between people and water in Africa focusing on the water and sanitation crisis as well as the challenge of achieving food security. Fundamental challenges of developing water such as the nature of development (e.g., 'bottom up' versus 'top down' approaches), uncertainty, sustainability and equity are discussed and illustrated through a series of diverse case studies that include development of rural and small-town water supplies in east and west Africa, conservation and development of floodplain wetlands in the Sahel, climate change in East Africa, and the use of transboundary water resources
