Course Description

This course provides a study of the processes and mechanisms for speech production (articulatory phonetics) and the articulatory and acoustic characteristics of English sounds, as well as the English phonological system. It examines the relation between the phonetic and phonological components of speech and their interaction with the rest of components of English language grammar and distinguishes the main phonetic and phonological traits that separate English from Catalan and from Spanish. The course is divided into the following teaching blocks: introduction to phonetics and phonology; physiology of speech production; classification of speech sounds, articulation and acoustic properties; the English phonological system; phonetic transcription; sounds in the speech chain, assimilation and weak form.
