**UCEAP Semester Units**

4.00

## Course Description

This course examines why children do what they do and how they think and acquire skills. It covers physical development, including biological development (e.g., genes, development of the brain, stress and hormone systems) motor and perceptual development (e.g., development of locomotion and perception of the object world), and cognitive development (e.g., development of language, learning, memory, self-regulation); interactions between developmental processes across these domains; how these developments influence behaviors and vice versa; how these developments are shaped by the various ecological systems within which they take place and vice versa.

### Language(s) of Instruction

English

### Host Institution Course Number

201700107

### Host Institution Course Title

DEVELOPMENT, LEARNING AND BEHAVIOR
