HEART AND CIRCULATION

UCEAP Transcript Title

HEART & CIRCULATION

UCEAP Quarter Units

12.00

UCEAP Semester Units

8.00

Course Description

This course builds upon students' primary knowledge of the heart and circulation. Contemporary views of cardiac and vascular physiology are considered. The course develops students' understanding of cardiac and vascular function in relation to cellular mechanisms, with an emphasis on translating this to the human subject and the pathology of various cardiovascular diseases. Practical sessions give first-hand knowledge and experience of two techniques for assessing cardiovascular functions: blood pressure and organ bath pharmacology.
