6.00

UCEAP Semester Units

4.00

Course Description

This course elaborates on the macroeconomic topics and theories that have been discussed in prior courses. A key concern is the coordination between the goods market, the labor market, and financial markets in a closed economy framework. Coordination failures play a central role in explaining macroeconomic fluctuations and providing roles for fiscal and monetary policy. The course develops a new Keynesian view of macroeconomics, developing theories and models for the short- and medium-run. Using recent OECD Economic Outlooks, macroeconomic theory is applied to a wide variety of recent macroeconomic problems and policy dilemmas. The course also includes some critical reflections on the standard new Keynesian model.
