Course Description

This course introduces the basic anatomy of the human brain and nervous system, and how they are employed to achieve everyday human activities, from thoughts to action. It also examines how the abnormalities within the brain can result in psychiatric problems. Course topics include: nerve cells and nerve impulses; synapses; anatomy and research methods; genetics, evolution, development and plasticity; vision and other sensory systems; wakefulness and sleep; internal regulations; reproductive behaviors; emotional behaviors; learning and cognitive functions, and psychological disorders.
