7.00

UCEAP Semester Units

4.70

Course Description

Increasingly, scientists are being called to justify some of their practices, such as human and animal experimentation, genetic modification, use of dead human bodies, and publication of controversial work. This course covers basic ethics in science and the moral and social implications of life science for human life, particularly its earliest stages. The course provides an opportunity to examine the ethical implications of life sciences and biotechnology.

Language(s) of Instruction

English
