2.00

## Course Description

This course focuses on the intersection of technology, media, communication, and society. In light of its rapid growth and broad adoption, the internet has become both the medium and the target of military, political, social, and cultural conflicts. This course focuses on the technological, institutional, and political aspects of online conflict. Students will study this space by analyzing three interrelated dualities of internet design, regulation, and use. This class takes a broad look at cybersecurity as a core issue in an information society. Students develop analytical thinking about the role of technology design, regulation, and use in contemporary conflict.
