Course Description

This course examines industrial organization (IO), which is a subfield of micro-economics, to study the behavior of firms and market structure especially focusing on imperfectly competitive markets. Students analyze how firms behave in different market structures and how the behavior of firms affects the outcome of the economy. Most lectures are theoretical and focus on formal analysis rather than case studies. The course makes heavy use of game theory and uses basic calculus and statistics to solve the maximization problem in various situations.
