UCEAP Transcript Title HEALTH ECONOMICS
UCEAP Quarter Units 8.00
UCEAP Semester Units 5.30

Course Description
This is a new course running in Semester 2 and aims to provide students with an introduction to the key concepts, methods and understanding of the application of economics to health and health care. Students will gain knowledge of the core theories underpinning health economics, but more importantly, it aims to stimulate students¿ critical thinking about the major challenges health care systems face and how governments and policy makers can manage those challenges. The course covers a range of topics including demand and supply for health and health care, international perspectives on health system resources, health insurance and health care financing, economic evaluation methods and resource allocation in health care, health inequalities, health in the context of economic growth and development, an introduction to behavioral economics, and the economics of mental health.
