Course Description

This course aims to explain the importance of various natural processes and human activities that shape the modern Earth and lead to global environmental change based on the interdisciplinary scientific principles of climate, ecosystems, and biogeochemistry. The course uses primary scientific literature, presentations, videos and the discussion on global change prediction, assessment and policy measures to provide a critical understanding of physical climate system and its variability, the carbon cycle and related biogeochemistry and ecosystem processes, land use issues, the interactions among climate, ecosystems and biogeochemistry, and the impact of global change on societally relevant parameters. You should be able to read and interpret a scientific paper and assess a global change-related topic or policy in the context of multiple disciplines.
