FIELD METHODS IN GEOSCIENCES

UCEAP Transcript Title

FIELD MTHDS GEOSCI

UCEAP Quarter Units

12.00

UCEAP Semester Units

8.00

Course Description

This course is designed exclusively for non-graduating overseas undergraduate students seeking advanced training in geological field methods. It consists of hands-on experience honing observational and mapping skills by participating in focused residential and one-day excursions, associated laboratory classes, and at least one week-long residential course. The course takes full advantage of the University's location close to classic geological locations such as the NW Highlands region including the Moine thrust system, the Buchan and Barrovian metamorphic zones in the Dalradian terrain, and the Carboniferous sequences of North East England and Fife. The field excursions this semester include week-long trips to Spain, Durness, and the Isle of Mull. The assessment for this course encompasses 100% coursework, which is reports from the field trips.
