4.50

**UCEAP Semester Units**

3.00

## Course Description

In this course students develop the skills to formulate research questions on social inequality and to answer them quantitatively and empirically. The course conveys theoretical perspectives on social structure analysis on the basis of currently relevant empirical studies on inequality dynamics in Germany. At the end of the course, students are able to answer empirical questions on inequality dynamics. The focus is on the development of practical skills. Students examine in detail the evaluation of the data of the socio-economic panel, which are particularly relevant in this context. Basic knowledge in statistical procedures and in dealing with Stata or R is required.
