Course Description

The course examines the principles and arts of statistical visualization and exploratory analysis of data. Course content includes construction of informative bi-variate plots, alongside visualization of multivariate data. It explores dimensional reduction, non-linear methods (t-SME, isomap, Proxigrams), and exploratory cluster analysis. Students examine standard methods for visualization of relational and graph data (Gephi), the importance of guarding against "snooping" and basic principles of color scale design and glyph choice.
