Course Description

This course covers the techniques for interpreting and analyzing financial and accounting data for management control purposes. It is designed to deliver relevant methodologies and skills, including cost-volume-profit analysis, profit planning, budgeting, and control over overhead costs. It provides a basic understanding of accounting information needed by management in the control of operations. The course seeks the following learning goals: Fundamental knowledge of the discipline, Creative thinking and problem-solving skills, and Business ethics. The goal is to define costs and understand different classifications of costs; to understand the costing methods for manufacturing businesses; to understand cost-volume-profit relations and apply CVP-related concepts for managerial analysis; to understand different kinds of managerial accounting decisions and exercise the necessary skills and knowledge for good decisions; and to understand performance management and measurement.

Prerequisite: BIZ1101-Financial Accounting
