Course Description

The course offers a study of the fundamental theoretical bases and practical methodology to carry out a neuropsychological assessment in order to obtain a clear neuropsychological diagnosis. The course discusses how to collect the neuropsychological anamnesi including all relevant information on the personal history of the patient; how to observe the patient, his/her behavior and how to interview him/her; how to select and administer the appropriate psychometric tests; and how to integrate all the information in a diagnostic reasoning. The course examines topics including behavior assessment and measurement, neuropsychological anamnesi, interview techniques, psychometric instruments, diagnostic conclusion, and the neuropsychological report. There are no prerequisites, but knowledge of brain and behavior relationship and the bases of neuropsychology are important for following the course.
