UCEAP Semester Units 4.00

Course Description

This is an interdisciplinary course that addresses sustainability, climate change and how to combine economic development with a healthy environment. Students explore greening the economy and the sustainable development goals on four levels – individual, business, city, and nation, and look at the relationships between these levels. Practical examples of the complexities and solutions across each level are discussed. A particular focus is placed on examples from Scandinavia, but the course also features examples from Europe and around the world.
