COURSE DETAIL

ENGINEERING DESIGN

Country
United Kingdom - England

Host Institution
University College London

Program(s)
English Universities,University College London

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Mechanical Engineering

UCEAP Course Number
130

UCEAP Course Suffix

UCEAP Official Title
ENGINEERING DESIGN

UCEAP Transcript Title
ENGINEERING DESIGN

UCEAP Quarter Units
6.00

UCEAP Semester Units
4.00

Course Description
This course studies engineering design to develop core practical, theoretical, and computational engineering skills, and discusses the role and relationship between them. The course develops a wider appreciation of how engineering design shapes the made world. Given a product brief set by the course tutor, the students are required to design, analyze, build, and test a physical prototype, and then show how it meets the design brief. Students learn to interpret a design brief, design techniques, and methodologies using computational design and analysis tools such as CAD and MATLAB analysis; materials selection; using mechanical tools; and safe workshop practice. Students also design and make a physical prototype and present the analysis, both technical and environmental, that demonstrates the solution to the design brief.

Language(s) of Instruction
English
