Course Description

This course examines the neurobiological aspects of normal aging as well as those caused by various forms of dementia. It analyzes the cognitive changes and decline associated with aging on a normal brain, as well as those impacted by Alzheimer's disease, Pick's disease, Parkinson's disease, Huntington's disease, multiple sclerosis, vascular dementia, and dementias due to HIV. It also explores techniques and procedures for early detection of cognitive impairment and possible intervention in the areas of memory, control and integration processes and language.
