Course Description
This course provide an in-depth understanding of Hong Kong marine heritage in relation to its historical, social, economical, physicochemical, and ecological aspects. In particular, the course presents key principles and skills to resolve the environmental problems with respect to the sustainable development of marine natural resources. The course also explores the positive and negative impacts of science and technology such as those demonstrated in the evolution of fishing gear and chemical use. Eventually, the course covers how to critically analyze the various situations, problems, conflicts and solutions regarding the use and management of our marine resources. Assessment: self-learning exercises, field trip worksheet, in-class assessment, group project, tutorial participation and individual presentation, written assignment.
