Course Description

Starting with the 2008 crisis and its consequences on the economy, this course traces the reactions of political authorities to escape the recession and reduce economic imbalances. In this context, it outlines the policies of structural politics and attempts to analyze their impacts on the growth perspectives in the years to come. Lastly, the course revisits the various economic policies (budgetary, monetary, and employment) put into place in the past twenty years in France, and their consequences on the French economy. It reviews the aid instruments that economists possess to examine their optimal economic policies: structural unemployment, production potential, output gap, and macroeconomic model.
